

## AngularJs Authorization with Ui router

In app2.js

```
(
function () {
  var app = angular.module('demo', ['ui.router', 'CurrentUserFactoryModule']);
  app.config(function ($stateProvider, $urlRouterProvider) {

    $urlRouterProvider.otherwise("/");

    $stateProvider
      .state('home', {
        url: "/",
        templateUrl: "PartialView/Home.html",
      });
    $stateProvider
      .state('AccessDenied', {
        url: "/AccessDenied",
        templateUrl: "PartialView/AccessDenied.html",
      });
    $stateProvider
      .state('signIn', {
        url: "/signIn",
        templateUrl: "PartialView/Loginn.html"
      });

    $stateProvider
      .state('private', {
        url: "/private",
        templateUrl: "PartialView/private.html",
        data: {
          roles: ['Admin']
        },
        controller: "PrivateCtrl",
        resolve: {
          authorize: ['authorization',
            function (authorization) {
              return authorization.authorize();
            }
          ]
        }
      });

  });

  app.run(['$rootScope', '$state', '$stateParams',
    function ($rootScope, $state, $stateParams) {
      $rootScope.$on('$stateChangeStart', function (event, toState, toStateParams) {
        $rootScope.toState = toState;
        $rootScope.toStateParams = toStateParams;
      });
    }
  ]);
}
))
```

The **private** page requires a specific role

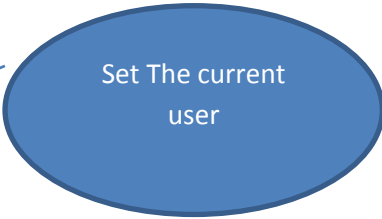

Use resolve to call **authorization** factory

Need to call on each state change event

In MyCtrl.js

```
angular.module('demo').controller('HomeCtrl', ['$scope', '$state', 'CurrentUser',
function ($scope, $state, CurrentUser) {
    $scope.User = {};

    $scope.signout = function () {
        principal.authenticate(null);
        $state.go('signin');
    }
    $scope.Loginn=function()
    {
        CurrentUser.setProfile($scope.User.UserId, $scope.User.Password, 'admin')
    }
}
])
```

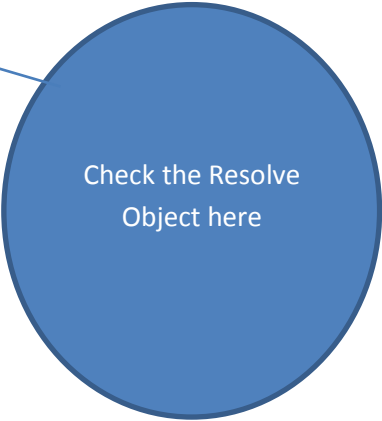

Set The current  
user

In PrivateCtrl.js

```
angular.module('demo').controller('PrivateCtrl', ['$scope', '$state', 'CurrentUser',
'authorize',
function ($scope, $state, CurrentUser, authorize) {
    if(!authorize.IsloggedIn)
    {
        $state.go("signInn");
        return;
    }

    if (!authorize.role) {
        $state.go("AccessDenied");
    }
}
])
```

Check the Resolve  
Object here

In `CurrentUserFactory.js`

```
(  
function () {  
    var CurrentUserFactoryModule = angular.module("CurrentUserFactoryModule", []);  
    angular.module("CurrentUserFactoryModule").factory("CurrentUser", CurrentUser);  
    function CurrentUser() {  
        var profile = {  
            isLoggedIn: false,  
            username: "",  
            token: "",  
            Role: ""  
        };  
        var setProfile = function (username, token, Role) {  
            profile.username = username;  
            profile.token = token;  
            profile.isLoggedIn = true;  
            profile.Role = Role;  
        };  
  
        var getProfile = function () {  
            return profile;  
        }  
  
        return {  
            setProfile: setProfile,  
            getProfile: getProfile  
        }  
    }  
}());
```

In authorizationFactory.js

```
angular.module('demo').factory('authorization', ['$rootScope', '$state',
'CurrentUser',
function ($rootScope, $state, CurrentUser) {
    return {
        authorize: function () {

            var isAuthenticated = CurrentUser.getProfile();

            var Loginstatus = {};

            if (isAuthenticated.username=="")
            {
                Loginstatus.IsloggedIn = false;
                return Loginstatus;
            }
            else {
                Loginstatus.IsloggedIn = true;
                if ($rootScope.toState.data.roles &&
$rootScope.toState.data.roles.length > 0) {
                    for(var i=0;i<$rootScope.toState.data.roles.length ;i++)
                    {
                        if ($rootScope.toState.data.roles[i] ==
isAuthenticated.Role)
                        {
                            Loginstatus.role = true;
                        }
                        else
                        {
                            Loginstatus.role = false;
                        }
                    }
                }

                return Loginstatus;
            }
        }
    };
}
]);
```
