

Saving A file in c#

<http://stackoverflow.com/questions/9725584/server-mappath-to-go-two-folder-back-from-root>

```
string root = HttpContext.Current.Server.MapPath("~/");
    string parent = Path.GetDirectoryName(root);
    string grandParent = Path.GetDirectoryName(parent);
    var filePath = grandParent + @"\Mylearn.Web\Content\Images" +
"//" + postedFile.FileName;

    postedFile.SaveAs(filePath);
```

If you really need the grandparent path, you can get it from the root path using `Path.GetDirectoryName()`:

```
string root = Server.MapPath("~/");
string parent = Path.GetDirectoryName(root);
string grandParent = Path.GetDirectoryName(parent);
```
