

Angular Extend

```
angular.forEach($scope.stagedetails, function (value, key) {  
    var addFirstColumn = { enable: true };  
    angular.extend($scope.stagedetails [key], addFirstColumn);  
  
}  
  
  
  
angular.forEach($scope.facilitylist, function (value, key) {  
    var addIdColumn = { id: value.id };  
    var addlabelColumn = { label: value.name };  
    var mergedObject = angular.extend(addIdColumn, addlabelColumn);  
    $scope.facilitylistTemp.push(mergedObject);  
  
});
```
